

For Immediate Release
February 2, 2006

Virpus Networks, LLC, a Kansas City, MO based company, proudly announces its grand opening, launching Virpus Servers and Virpus Hosting as its brands.

Virpus Networks, LLC. associates its name with only the best vendors in the industry, such as Dell, Cisco Systems, APC and more, to make sure that you experience the best in server/hardware performance as well as network performance. Virpus Networks also uses one of the finest 'Grade A' datacenters in the world, which is located in Dallas, TX and powers the Virpus Networks, LLC goal of providing a clean premium network to its customers, and with helping keep uptime at a maximum. Using **Internap and Level 3** as its transit providers, Virpus Networks offers one of the most dynamic networks available on the internet with paid transit to every major domestic internet service provider, yet still having a network that can pass down great connections to oversea countries.

Virpus Servers offers dedicated servers and VPS servers using Virtuozzo technology. Virpus Servers also offers Dallas collocation in their state-of-the-art datacenter space and linux server administration services to dedicated server customers and non-dedicated server customers.

Virpus Hosting offers standard web hosting and reseller accounts using Dual Xeon 2.8GHz Processors, dual hard drives, and at least 2GB of ram on each server. Virpus Hosting includes with each reseller a accounting/billing manager for their customers to manage their clients on. All servers are also on Cisco PIX firewalls rather it's a customers server or a Virpus Networks server.
