

For Immediate Release  
July 18, 2007

Virpus Networks, Inc (<http://virpus.com>), a Kansas City, Missouri based company announces the opening of its Kansas City location, where their operations are now based out of. Virpus Networks is now located in Kansas City's Carrier Hotel – the fiber rich 1102 Grand building located in downtown Kansas City. The building is also home to other ISP's and IP carriers such as at&t, Verizon, Level 3, Cogent, Time Warner Telecom and more.

In addition to the new location, the company also has a new network established, which is considered to be one of Kansas City's most premium networks available. The company uses LightEdge Solutions as its primary IP carrier which delivers to Virpus Networks' customers a BGP of five Tier 1 providers (at&t, Qwest, UUNet/Verizon Business, XO and Cogent) through eight upstream connections.

Virpus Networks' CEO, Kenneth Odem, commented that "We are very proud of the relationship we have established with 1102 Grand of being able to grow our business at their facility. Not only that, but it has been a pleasure to finally work with the staff at 1102 and call it our home." Furthermore, he stated that "LightEdge Solutions was the only carrier that was able to meet up to our demands for a solid network yet with diverse routes through various providers. We have spared no expense to bring in LightEdge Solutions as our primary IP provider."

In response to these changes, the company also decided to makeover their entire website to provide for a more professional look and to also provide for a more user-friendly navigational system for finding the appropriate services for its customers.
